

# Grade Guide

SOLID HARDWOOD  
ENGINEERED WOOD

# Grades for all styles

The grade of wood is one way to classify hardwood flooring according to the different plank textures and natural features. Knots, mineral streaks, shakes and checks, or other character traits do not impact the quality of the planks. The choice of grade is also a matter of design preference and will depend on the look that you want your floor to have. Wickham Flooring offers up to 5 grades of wood depending on the range of hardwood or engineered wood floors that you choose.

Note that images in this guide are included for illustrative purposes only. Display screens and printed material can never exactly reproduce all the variations and subtleties of wood textures. Please refer, at all times, to natural samples.
